# ANKIT KUMAR

*B.Tech CSE (AI) Student / Aspiring Software Engineer*

ankitkumar17541@gmail.com • 9835616131•linkedin.com/in/ankit-kumar525•github.com/Ironankit525 • Portfolio Website

## PROFESSIONAL SUMMARY

Second-year B.TechComputer Science student specialising in Artificial Intelligence at Vedam School of Technology (Ajeenkya DY Patil University), with hands-on experience building full-stack web applications, mobile apps, and automated media pipelines. Actively contributing to open-source projects and preparing for Google Summer of Code (GSoC) and LFX Mentorship programs. Seeking competitive internships to apply skills in AI, full-stack development, and systems programming in production environments.

## TECHNICAL SKILLS

**Languages:** Java, Python,JavaScript, Rust, Golang, HTML5, CSS3
**Frontend:** React, React Native, Figma, Responsive UI/UX Design
**Backend & Databases:** Node.js, FastAPI, MongoDB, RESTful APIs, Backend Systems Design
**AI & Media:** LLM APIs, FFmpeg, OpenCV, Speech-to-Text, Computer Vision
**DevOps & Infrastructure:** Linux, Docker, Git, GitHub
**Tools & Workflow:** VS Code, n8n (Automation), Google Sheets, Version Control (Git/GitHub)
**CS Foundations:** Data Structures & Algorithms, OOP, Problem Solving, Open Source Contribution
**Currently Exploring:** Cybersecurity Basics, Backend Systems Design, GC-aware Memory Management, Golang

## EDUCATION

**AjeenkyaDYPatil University — Pune, Maharashtra** *2025 – Present*
**Vedam School of Technology**
*B.TechinComputerScienceEngineering | Specialisation:ArtificialIntelligence | 2ndyear*

- Pursuing core courseworkinA I Foundations, Data Structures, OOP, and Database Management

**St.Karen'sSecondarySchool** *2023–2025(12thStandard)*

## TECHNICAL PROJECTS

**Clipper—AutomatedShort-FormVideo Pipeline** *Python | FastAPI | FFmpeg | OpenCV | LLM APIs | n8n*
GitHub: github.com/Ironankit525/clipper

- Builtanend-to-endpipeline converting long podcasts into ranked, captioned 9:16 shorts — yt-dlp, word-level transcription, LLM moment selection and FFmpeg rendering; 7 clips published automatically to YouTube
- Engineered speaker-tracking reframing with YuNet DNN face detection and a dead-band follow algorithm, removing camera jitter completely (53 snaps → 0) where naive frame-by-frame tracking failed
- Designed a crash-safe FastAPI job queue with idempotent uploads, duplicate and quota guards, and automatic resume, driving scheduled posting through a local n8n + YouTube Data API v3 workflow

**ARME-CommercePlatform** *React | Node.js | Full-Stack | E-Commerce*
Live: armgear.vercel.app GitHub: github.com/Ironankit525/ARM

- Builtafull-stacke-commerceapplicationfeaturingproductmanagement, user authentication, and a scalable Node.js backend architecture
- Developed the frontend with React, focusing on performance, clean UI/UX, and dynamic product rendering with real-time state updates
- Designed a modular, production-ready codebase with structured separation of concerns, integrating user auth and order management APIs

**CustomMarkerDetectionApp** *ReactNative | Android | Computer Vision*
GitHub: github.com/Ironankit525/Marker-detection-app

- Built anAndroid applicationwithReactNativethat accesses the device camera, renders a live feed, detects custom visual markers, applies orientation correction, and displays 20 processed markers from 20 different frames
- Implemented a JavaScript-based image processing pipeline for real-time marker detection with custom mathematical threshold constraints
- Delivered a production-ready APK with a custom app icon for internship submission

## OPEN SOURCE & CONTRIBUTIONS

- Activelyc ontributingto open-sourcerepositories through bug fixes, feature implementations, and documentation improvements — github.com/Ironankit525
- Proficient in Git-based contribution workflows: forking, branching, pullrequests, and addressing reviewer feedback; preparing for Google Summer of Code (GSoC) and LFX Mentorship
